The training ship "North Star" promises to its crew members all types of adventures. Forty pupils and teachers together with the staff from the boat, have a two-months emotional and learning journey ahead. The voyage will be truncated when a storm isolates them, coinciding with an accident at the CERN particle accelerator. Alone and disoriented at the sea, they will have to survive and fight for answers in a world where nothing will be the same anymore. A 70 meter long ship will be the stage for love and lack of love, friendship and enmity and, above all, a terrible enigma to tackle with.
